Student Learning Outcomes: Upon completion of this course, the student will be able to:

- Construct and administer an IDS solution on a network
- Assess and interpret normal and unusual network traffic
- Demonstrate appropriate and ethical behavior.

Program	Course Content	Course Placement
Information Systems	Network Security, Intrusion Detection, Incident Response	If other, describe placement in curriculum:

Rationale:

Does it still fit in the curriculum? If not, why? If it does, why? Does it reflect in our curriculum? If not, why? If it does, why? Does it reflect in our curriculum? If not, why? If it does, why?

Are any special programs associated with this course? Yes No

If yes, explain the need for this:

Hours: 3

Prerequisites: none

Course Description: Intrusion Detection/Prevention Systems Fundamentals Intrusion Detection/Prevention Systems are critical components of well-designed network architectures. These systems act as a line of defense, helping protect company assets from attacks.

In this course, students gain experiential learning in a thorough grounding in the design, implementation, and administration of IDSes/IPses, as well as practical, hands-on experience working with these systems. In addition, students analyze various attack signatures and the network traffic these systems collect.
